Berezka

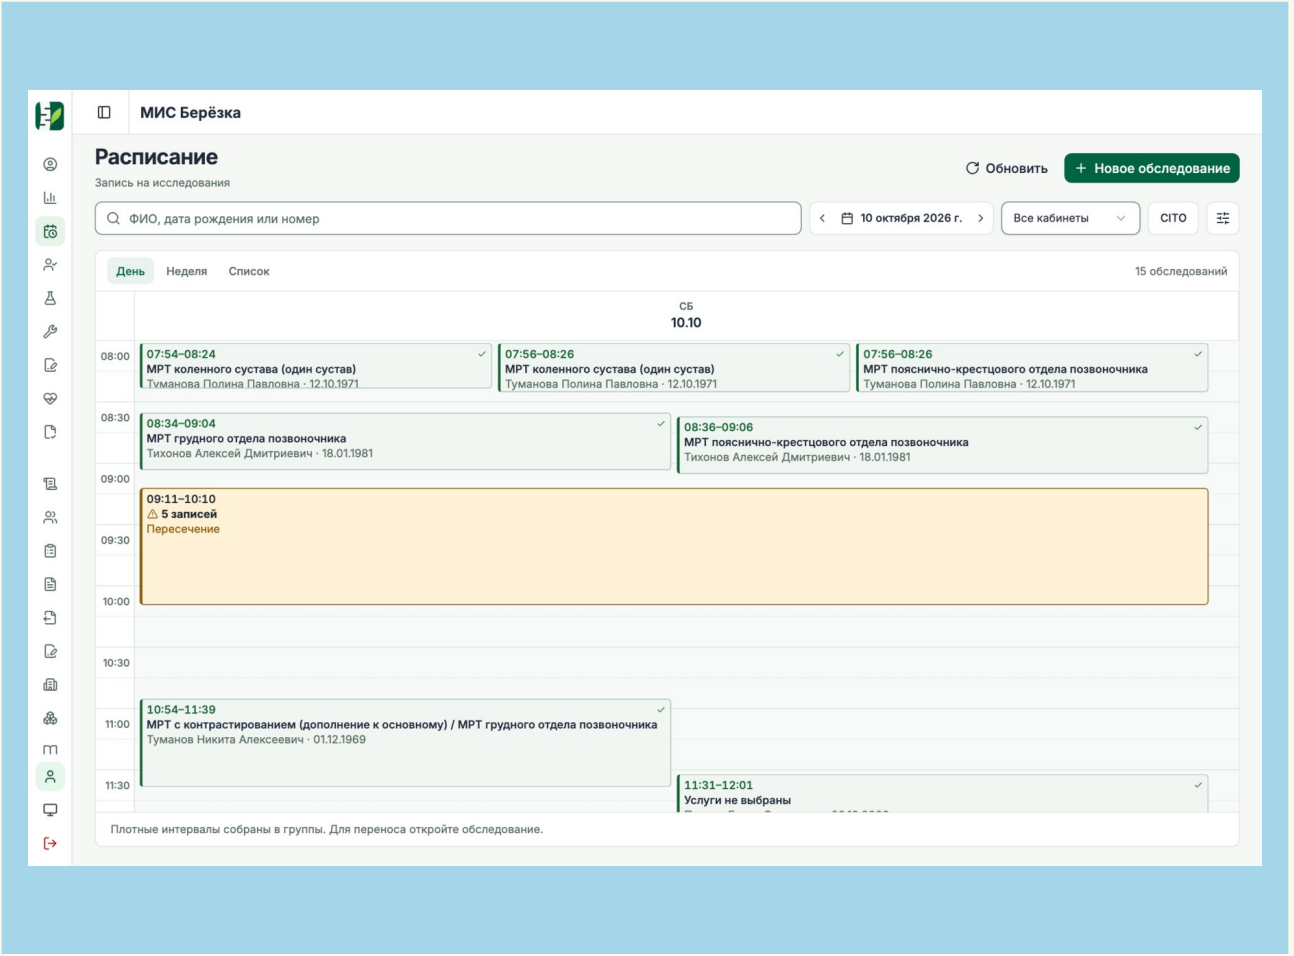

Radiology information system
for diagnostic imaging centres

Room schedules

Book consecutive scans in one visit. Reception can see how long the room is booked and when the next patient can come in.

Mark urgent referrals CITO. If a patient reschedules, staff update the existing booking.

At the front desk

Who has arrived?

Check-in lets the technologist see who is waiting. Reception can find a booking by patient or by room.

What will the patient pay?

Berezka totals the scans on the booking. Reception can quote the final fee, including a discount, an agreed price or a fee waiver.

The payer recorded at booking is used in the revenue breakdown.

The patient record

A returning patient

While reporting a scan, the radiologist can open an earlier report and compare the findings.

Referrals and outside records

Attach a referral or discharge summary once. The radiologist can find it in the record at the next visit.

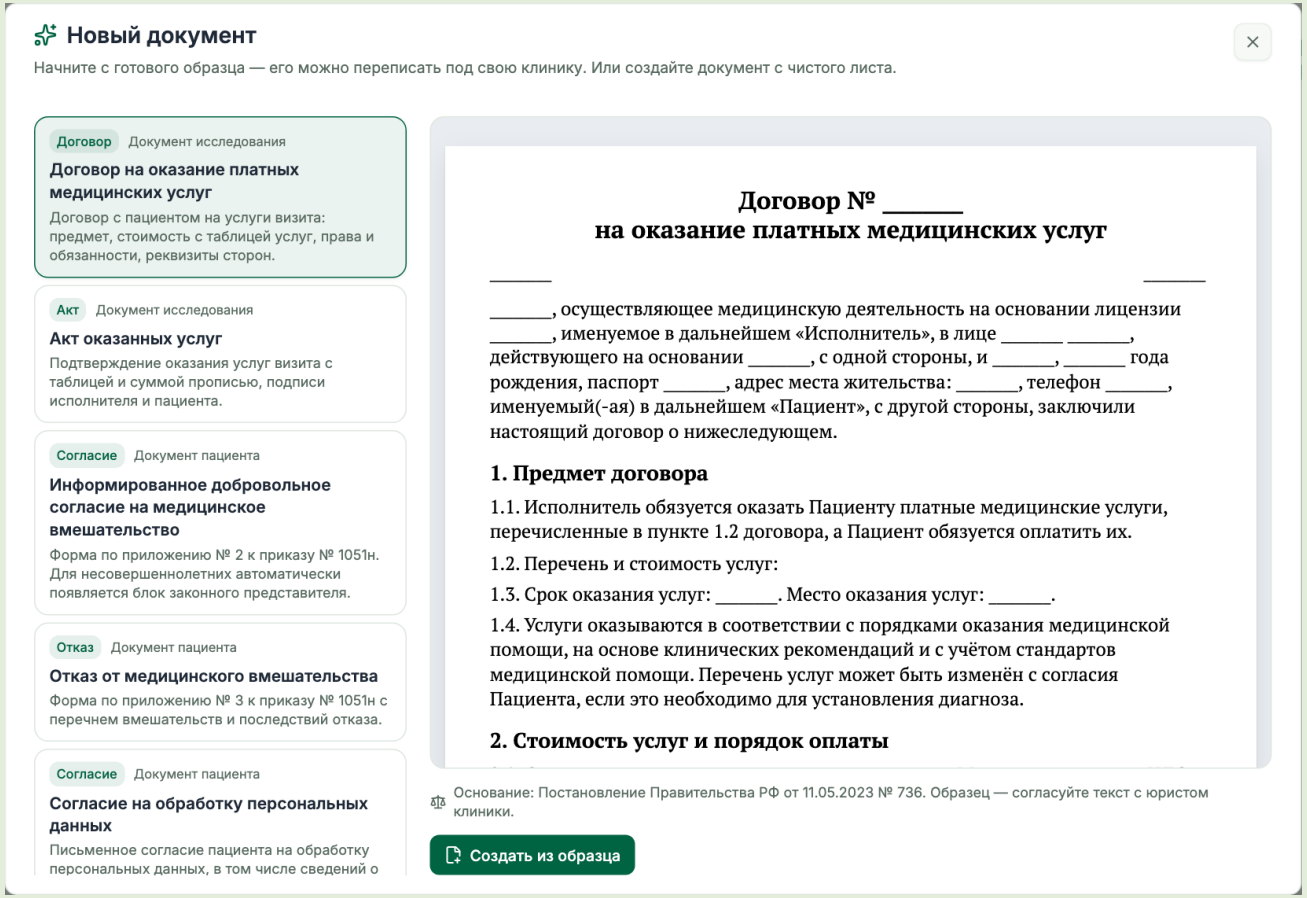

Duplicate records

If a patient's history is split across two records, staff can merge them after checking which examinations and reports will move.

Agreements and consent forms

Reception opens the form from the visit. Patient and clinic details are already filled in.

If a patient asks for a copy, staff can reprint the document as issued, even after the clinic changes its template.

A contract from the visit record

Reception selects the template from the visit to print a contract with the details already filled in.

In the template

Карта пациента: Номер карты пациента

ИНН исполнителя: ИНН клиники

On the printed contract

Карта пациента: PID2611180001

ИНН исполнителя: 0000000000

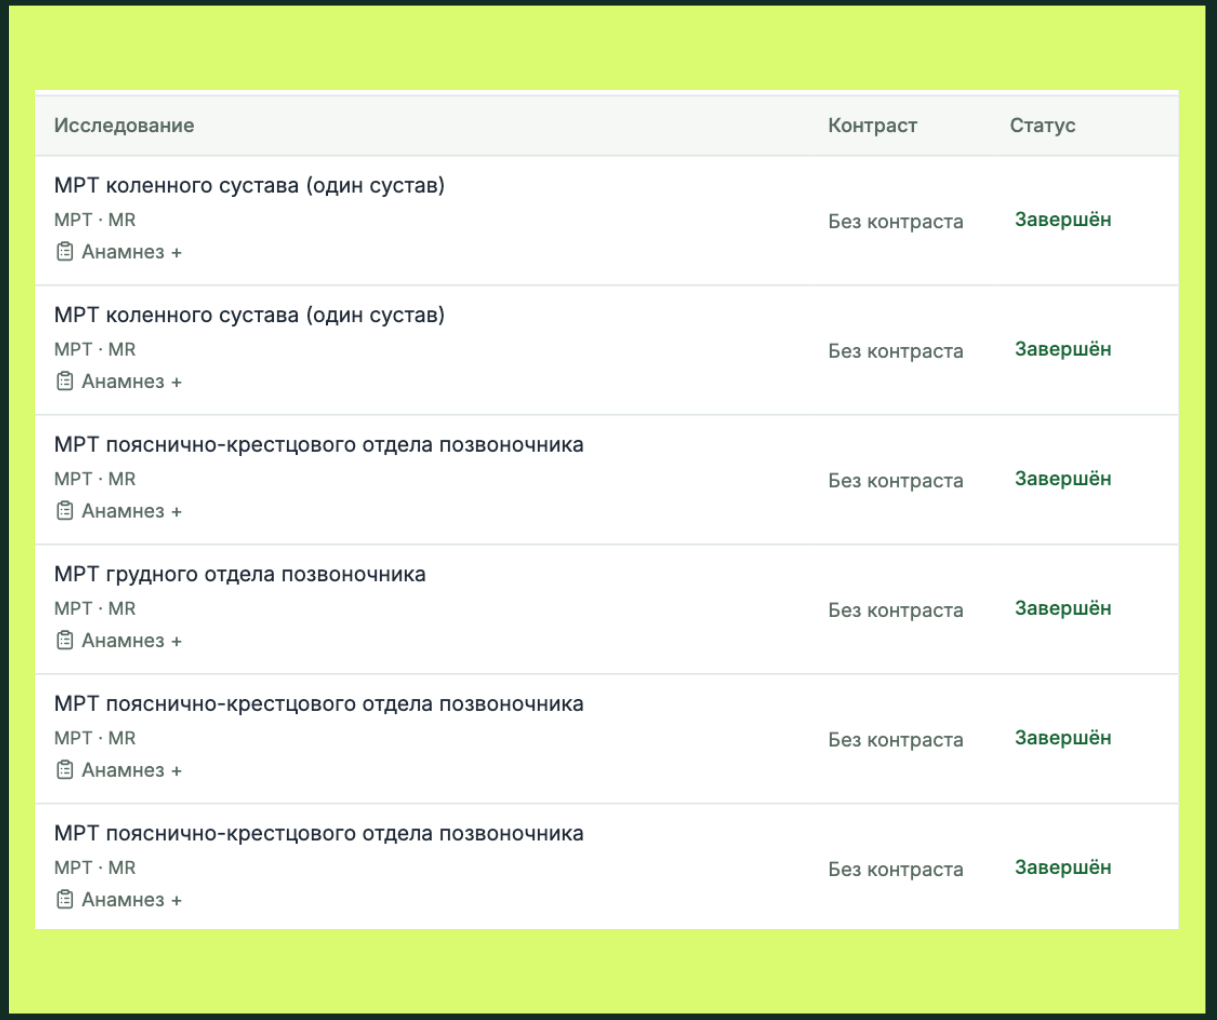

The patient chart supplies the record number. The clinic profile supplies the tax ID.

Orders at the scanner

The technologist selects the order from the connected scanner's DICOM Modality Worklist. Patient details and the requested scan are already there.

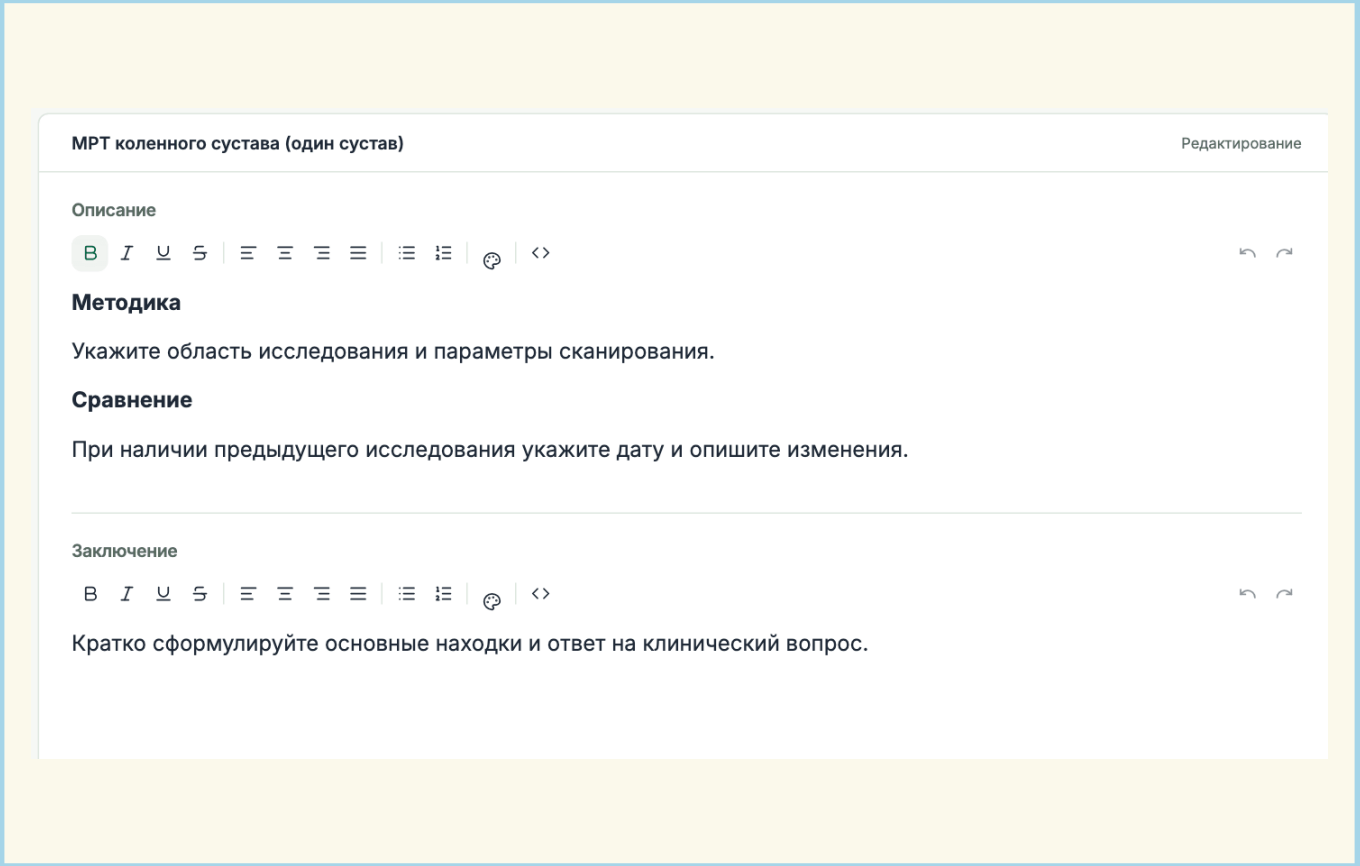

Images in PACS

With PACS connected, staff open the images from the visit. An authorised user can download the DICOM files to share the study with a colleague.

Исследование	Контраст	Статус
МРТ коленного сустава (один сустав) МРТ · MR Анамнез +	Без контраста	Завершён
МРТ коленного сустава (один сустав) МРТ · MR Анамнез +	Без контраста	Завершён
МРТ пояснично-крестцового отдела позвоночника МРТ · MR Анамнез +	Без контраста	Завершён
МРТ грудного отдела позвоночника МРТ · MR Анамнез +	Без контраста	Завершён
МРТ пояснично-крестцового отдела позвоночника МРТ · MR Анамнез +	Без контраста	Завершён
МРТ пояснично-крестцового отдела позвоночника МРТ · MR Анамнез +	Без контраста	Завершён

Reporting and amendments

The radiologist starts from the template for the scan and records the findings. If interrupted, they can resume the draft. Signing makes the report ready to issue.

Amending a signed report

The radiologist records the reason for the change. Staff can check the amendment against the original signed report.

Contrast stock

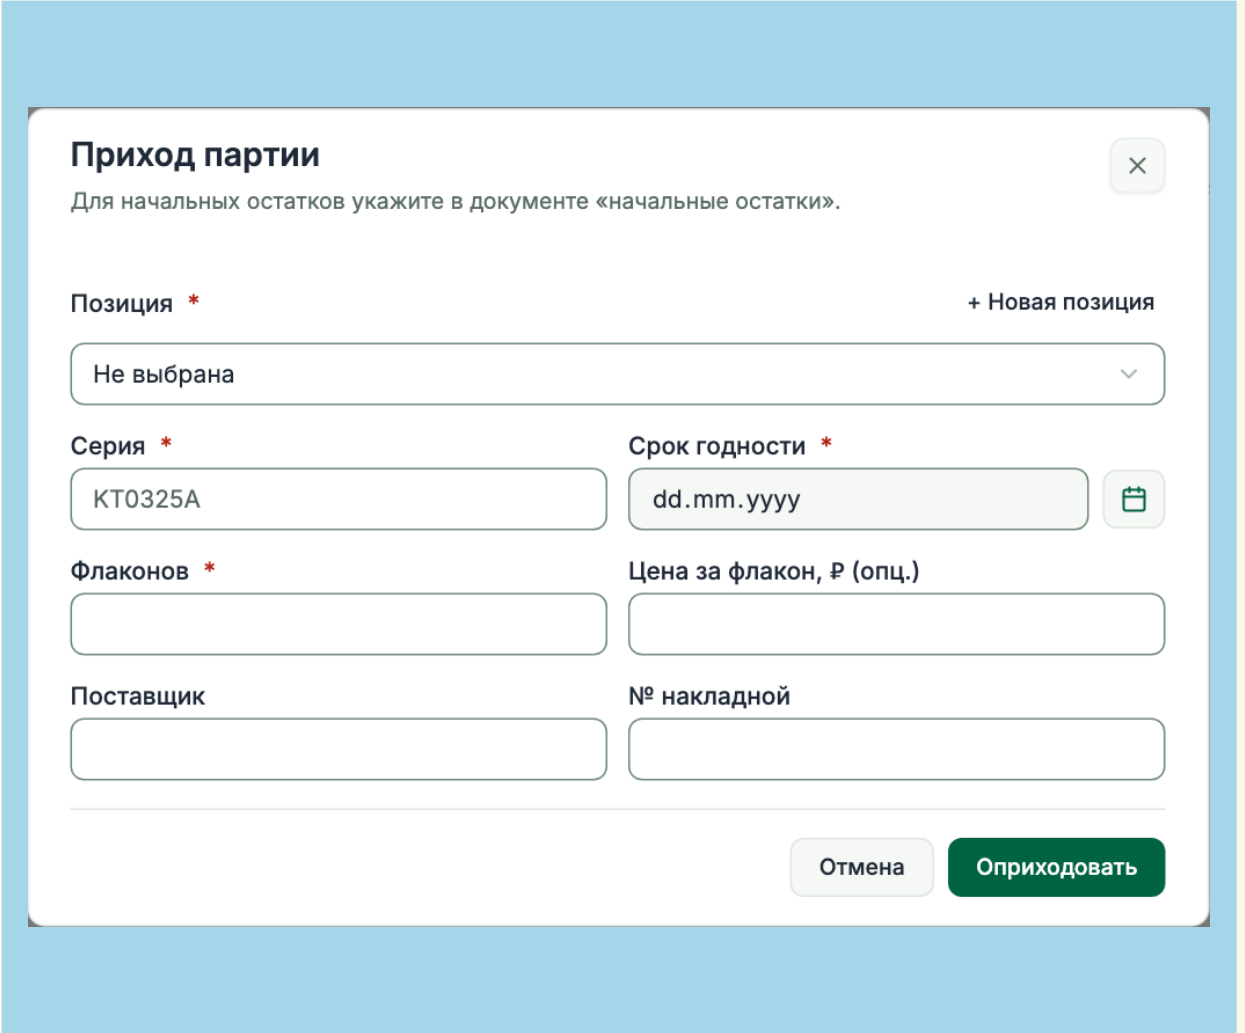

Before completing the scan, the technologist sees which lots will be used. Stockroom staff can reconcile usage by lot.

One vial, two entries

15 ml

administered from a 20 ml vial

The other 5 mL are recorded as waste. The ledger accounts for both the dose given and the unused contrast.

Electronic medical documents

For clinics connected to Russia's electronic medical document registry (REMD).

Before signing

Missing details are flagged while the radiologist can still edit the report.

Who signs

The clinic sets up signing on its behalf. The document retains both the radiologist's and the organisation's electronic signatures.

After submission

Staff can confirm registration or look up the reason for rejection. A paper copy is available for the patient.

Clinic administration

Booking the right room

The clinic links each procedure to the rooms that can perform it. At booking, reception has the fee and knows how much time to allow.

Tracing a booking change

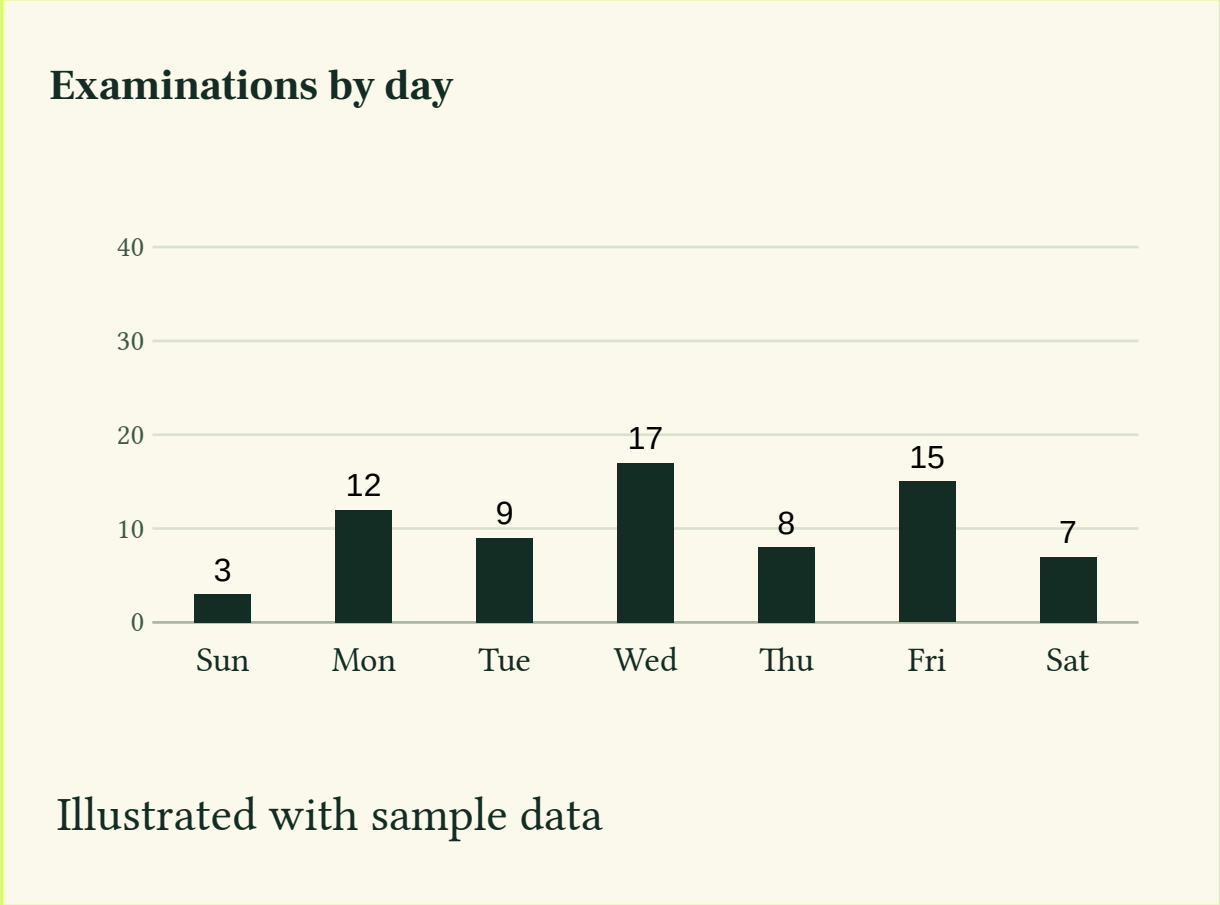

If a patient arrives at the original time, the administrator can check who moved the visit and when. Staff access is controlled by role.

Scanner activity and reporting times

Compare booked hours across scanners before extending a shift. Daily examination volumes show when extra appointment slots may be useful.

Completed examinations awaiting a report for more than 24 hours are counted separately.
